Ask the Expert:
Genetic Risk for Ovarian and Breast Cancer

Wednesday, November 7 • 6:30-8 :30 pm
Harry & Rose Samson Family Jewish Community Center
6255 N. Santa Monica Blvd, Whitefish Bay 53217
Community Room B

CEU 1.5 Credits available for Social Workers

Some women have genetic changes (mutations) in their DNA that make them more likely to develop ovarian and breast cancer. These genetic changes can be passed down from generation to generation. This important, free lecture is designed to empower women who may be at risk for genetic breast and ovarian cancer by breaking down the facts and identifying how early detection and lifestyle changes may reduce risks. Please bring a friend and help empower others

Presented by Angela Thompson, MS, Certified Genetics Counselor
Froedtert & The Medical College of Wisconsin

Made possible by a grant from the Helen Bader Foundation

Presented in sponsorship with the Harry and Rose Samson Family Jewish Community Center.
